#### **NBC News: Climate News**

# Climate change

"Climate change refers to long-term shifts in temperatures and weather patterns. These shifts may be natural, such as through variations in the solar cycle. But since the 1800s, human activities have been the main driver of climate change, primarily due to burning fossil fuels like coal, oil and gas."

(https://www.un.org/en/climatechange/what-is-climate-change)

1	Watch the Youtube video and tick the					
	correct answers:					
	The video is about:					

- O Rising global temperatures
- worse winter snowstorms
- O warmer weather and less snowstorms
- O climate change

## ্র্ত Viewing skills

- remember to read all the tasks and answers carefully before watching
- it doesn't matter when you do not understand everything, try to get the main information

#### ② Watch it again and fill in the gaps with the correct words.

carbon dioxide 2x	feel 1x	fuels 1x	gase	es 1x	in Boston 1x	increase 1x		
methane 2x								
The meteorologist says that we cannot actually global warming.								
Warmer air and oceans the available moisture.								
The oceans are the for hurricanes and cold storms.								
The top ten snowstor		have occurred in the last 25 years.						
		and		are da	angerous greenh	iouse		
is a mo	is a much more powerful greenhouse gas than							

## **③** Finished? Then answer the following questions:

- Explain the difference between methane and carbon dioxide.
- Describe president Biden's measures to stop methane leaking.
