

Name:

lernkarte lego-standbild

What is it?

A LEGO freeze frame is a still scene built with LEGO bricks that shows a specific moment from your chosen book.

It's like pressing „pause“ in a film: everything stops, and we see the characters, their actions, and their emotions in one important moment.

What do I need?

- LEGO bricks and figures

Example:

Step by step

1. Scene selection

- re-read key passages of the book
- choose one scene you like, e.g. because of its importance, emotional significance, ...

2. Scene breakdown: identify the key elements

- Who is involved? (= characters)
- Where does it take place? (= setting)
- What is happening? (=action)

3. Planning the LEGO model

- decide what bricks you need (e.g. figures, a table, trees, ...)

4. Building the LEGO scene

- arrange the bricks you chose, don't rush! try different arrangements
- make sure the final version still represents the scene you chose in the beginning
- take a picture of the final version so you can always replicate it

5. Preparing the presentation

- decide on how you want to present your LEGO freeze frame
you could use the following questions:
 - Which scene did you choose and why?
 - What is happening in the freeze frame?
 - How did you represent feeling or conflict?
 - What does the scene tell us about the characters or the story?

Extra tips

- use colors for symbolism: certain colors are associated with specific emotions (e.g. red for anger, blue for sadness, ...)
- action poses: use dynamic poses to show movement or emotion (e.g. a figure with a raised arm/fist might show anger)
- add simple background pieces to show the setting more clearly (e.g. a tree for outdoors, a table for indoors, ...)
