

Renewable Energy Fair

English Only !

Remember to speak English throughout the activity. Good luck and have fun!

① Research and Preparation (20 minutes)

Your group will be assigned one type of renewable energy: Solar, Wind, Hydropower, or Geothermal.

Use the provided materials or your devices to research your assigned energy type.

Focus on finding at least three main advantages of your energy source.

Prepare a short presentation about your energy type.

② Energy Fair (15 Minutes)

Set up a 'station' for your energy type in the classroom.

Two group members stay at your station to present.

The other two members visit other stations to learn about different energy types.

Switch roles after a few minutes so everyone presents and visits.

③ 3. Debate (10 Minutes)

Return to your groups and prepare to defend your energy type as the best option.

We will have a structured debate where each group presents arguments and responds to others.

④ Reflection (5 minutes)

As a class, we will discuss what we learned about renewable energy.

You will vote on the most convincing arguments presented.
